

This appendix is intended to list disposal operations such as they occur in practice. Waste must be disposed of without endangering human health and without the use of processes or methods likely to harm the environment.

Category	Description
D1	Tipping above or underground (e.g., landfills, etc.)
D2	Land treatment (e.g., biodegradation of liquid or sludge wastes in soils, etc.)
D3	Deep injection (e.g., injection of pumpable wastes into wells, salt domes, or naturally occurring repositories, etc.)
D4	Surface impoundment (e.g., discharge of liquid or sludge waste into pits, ponds, lagoons, etc.)
D5	Specially engineered landfills (e.g., placement into lined discrete cells that are capped and isolated from each other and from the environment, etc.)
D6	Discharge of solid waste into a water body (except seas/oceans)
D7	Discharge into seas/oceans including seabed insertion
D8	Biological treatment not specified elsewhere in this Appendix, resulting in final compounds or mixtures that are disposed of by means of any of the operations in this Appendix
D9	Physico-chemical treatment not specified elsewhere in this Appendix, resulting in final compounds or mixtures that are disposed of by means of any of the operations in this Annex (e.g., evaporation, drying, calcification, etc.)
D10	Incineration on land
D11	Incineration at sea
D12	Permanent storage (e.g., emplacement of containers in a mine, etc.)
D13	Blending or mixing prior to submission to any of the operations in this Appendix
D14	Repackaging prior to submission to any of the operations in this Appendix
D15	Storage pending any of the operations in this Appendix (excluding temporary storage pending collection at the site where it is produced)
