I do not have dates yet, but I have learned the machine shop did not have a license but work was done by Xray Engineering, Peabody Testing, US Testing, Geo Construction Testing, and last was Smith Emery. Most of these guys were the same group of people just a lot a name changes.

Kent

In preparing our historical radiological assessment of the Hunters Point Shipyard and NRDL we are now looking to see what radioactive materials licenses Triple-A Machine Shop Inc. may have had while they ran Hunters Point from 1974 to 1986. We would appreciate it greatly if RHB could provide us a list of any California RAM licenses they may have with start dates and termination dates and also if any of your inspections (if any) found significant violations.

Thanks very much  
Dick Lowman
